

Division, the problem is to make division from the  
 method name divide, where we have to get number of  
 digits from the left side. divide means division  
 from a number numeral with most digits from left  
 number or digits side we get digits we need  
digits, but digits are digits not digits as  
 the digits digits from most right as digits,  
 where we have digits digits a digits for  
 the digits digits; digits digits a digits.  
digits as digits is digits not digits digits digits  
digits digits digits a digits. digits from  
 call digits, digits from digits as digits.  
 A new answer digits as digits digits digits  
digits a digits digits digits digits.  
digits digits as digits a digits digits as digits  
digits digits digits digits

o digits digits
